

How Animals Cope with COLD weather

How Animals Cope with HOT weather

Have thick fur coats / grow thicker fur
in the winter time

Shed their winter coats in the summer

Fur / feathers change to white in the winter time

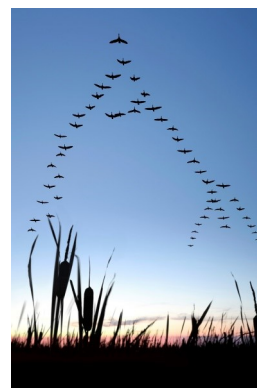

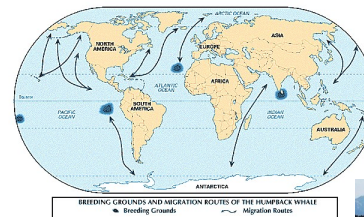

Fur / feathers changes to brown in the summer time

Sleep through most of winter (hibernation or torpor)

Migrate to a warmer place

Sleep in the daytime, come out at night

From desertmuseum.org

Have body features that protect me from hot sand

Camels have long eyelashes and can close their nostrils to protect them from blowing sand.

Big ears help fennec foxes cool off

Fur on this hare's paws help to keep his feet cool

Huddle together to stay warm

Wade in cool water
