

Make a Kite

- Fold paper in half crossways.
- Mark point A (~1 inch from folded edge), point B (~ 1 inch from other edge)
- Fold back top layer on diagonal from point A to B
- Make the same diagonal fold on the other side

- Unfold paper, decorate as desired, and then re-fold it.
- Turn the paper over, and fold the "spine" down.
- Draw a mental line (or a real one) between C and D. Tape the spine there, then punch a hole, as close to the fold as possible.
- Slide a skewer through the hole from C to D. Tape it down.

- Place a piece of tape on the spine an inch down from the skewer. Punch a hole there. (The tape reinforces the hole.) Tie a string through that hole.
- Tape the base of the spine together. Punch hole at base, add ribbon tail.
- Fly your kite!! Hold onto the end of the string. RUN and it will fly behind you.
